## **PINTO ROAD – FIVE RIVERS OVERHEAD LINE UPGRADE PROJECT**

The Trinidad and Tobago Electricity Commission embarked on a project in 2017 to upgrade the transmission infrastructure connecting its Pinto Road Substation to Five Rivers Substation.

**WHERE:** **Five Rivers, Bon Air, Arouca, Mausica, D'Abadie, Arima and environs.**

In an effort to minimise:

- (1) the negative impact of the works to the travelling public on the associated roadways; and
  - (2) the impact of electrical outages to businesses, schools and other commercial customers,
- maintenance activities were also scheduled on the weekend.

***This project is expected to be completed by September 2018 and customers would be informed of specific outages in advance.***

**WHY:** The upgrade includes the replacement of 117 corroded poles and 10 km of conductors between Arima and Five Rivers with the overall objective to replace aged infrastructure, upgrade the electrical characteristics of the circuit and improve the reliability of supply to customers.

The Commission regrets the inconvenience which may be caused by these interruptions.
